## Firefox app location

Including your location in apps has become extremely popular over the last year. Looking at the permissions you give when installing an app, it seems like every app on the market wants to know where you are. But don't be upset, these apps aren't here to steal your identity or find you and find you, they're built to help you. Google was the first to bring location apps to the mobile platform. Furthermore, the technology came along with contributions from lots of developers and even Google. Wired Layar Layar is by far one of the best apps in the Google Play Store. Using augmented reality (AR) technology, Layar allows you to interact with the world around you with different layers of information. More specifically, there are more than 3,000 different layers that include categories such as restaurants, art, buildings and more. In addition, Layar has recently been updated with Layar Vision.Layar Vision additionally uses your camera and recognizes real objects such as menus and posters. Finally, if you have a Samsung device, you may find yourself with Layar preinstalled. Price: Free! Requires Android: 2.1+ Download: HereGoogle Street ViewGoogle Maps Street View takes mobile mapping to the next level This popular desktop feature is now available as an add-on for Google Maps.Street view lets you see Google maps from a street-level perspective. The images are always 360 degrees and can help you find shops, parks and more that may not be listed in the map itself. Have you ever wondered how Google gets their pictures? Price: Free! Requires Android: 2.1+ Download: HereTaxi MagicNeed taxi? Taxi Magic for Android allows you to find taxis near you. In addition, you can monitor the taxi in real time until it picks you up. Finally, the app allows you to quickly pay with your credit card. These features are available in 40 major U.S. cities. Taxi Magic allows you to hail a taxi in more than 4,000 U.S. and Canadian cities. The app and its services are completely free except for the \$1.50 in-in-app credit card payment documentation fee. Price: Free! Requires Android: 1.5+ Download: HerePoyntLooking for dinner, movies and shopping in the city? Let us poynt you in the right direction! Poynt is a location-based search app for finding businesses, movies, restaurants, people, deals, and events near you. Once you've found the perfect place with Poynt, the app lets you make quick phone calls, get directions, watch showtimes or even book a table! Have you ever heard of timescity.com? The creators of Poynt also developed an app called timesPoynt. The app searches the area for events, movies, restaurants and nightlife! Price: Free! Requires Android: 1.6+ Download: HereGasBuddy5 gas prices on the rise and showing no signs of stopping anytime soon, presumably you're looking for the lowest prices. GasBuddy finds you the lowest priced gas stations around you with just one click Button. In addition, the service is supported by users who enter gas prices through the app. Furthermore, each time you enter a gas price you will earn a certain amount of points. If you get enough points you can enter to win a \$250 gas gift card that is given once a week! While user-supported apps have been known to fail in the past, GasBuddy's reward system has created a reliable community of gas friends. Price: Free! Requires Android: 1.6+ Download: HereLocaliciousLocalicious is the most primitive way to find what's good about the hood. Backed by WhitePages, this app will help you find local restaurants, businesses and more. Unlike other similar applications, Localicious is not limited to large cities. More than 80,000 U.S. cities are available in the Localicious database. Furthermore, the app will automatically find your location for the best and closest results. Finally, if you're in Foursquare, let's localize let its users pre-set check-ins! As soon as you get there, the locals will already report you. Price: Free! Requires Android: 2.2+ Download: HereYelpU Mood for Reviews? Or are you a critical guy? Yelp not only finds local businesses, gas stations, restaurants and more, it helps you find the best! After typing in a quick vague search, Yelp will allow you to narrow down results remotely, price and even hours of work. In addition, Yelp allows you to add pictures and reviews to businesses to alert or attract other users. Finally, Yelp can help you book a table immediately through OpenTable (our next pick) without leaving the Yelp app. Price: Free! Requires Android: Varies Download: HereOpenTableNot will only help You OpenTable find and reach more than 20,000 restaurants in the US, Canada, Mexico and the UK, this app gets you a place before you even stop. Now you can feel like a VIP with instant and free dinner reservations. Simply search, perfect, browse and book your table for free! Finally, if you think opentable is the app for you, you can join their free membership program to earn dining rewards and manage past and future bookings directly from your Android device. Price: Free! Requires Android: Varies Download: Here! so you have it! The best (free) location-conscious Android apps! Many developers and other bright minds in the billion-dollar app business say location-conscious apps and services are the next big thing. Do you agree? Mozilla has announced plans to launch a free iPhone app that will give you access to most of your firefox browser data on iPhone. Called Firefox Home , the original iPhone app gives you access to Firefox history, tags, and awesome Bar. The House will also all currently open tabs from Firefox on the desktop to iPhone, initially giving you instant access to important websites. It's not clear when Firefox Home will become available, but Mozilla says it plans to send the app to Apple in June, at which point Apple will either or or reject it. Firefox Home is designed for iPhone and iPod Touch, and Mozilla has not released plans for the iPad version.Not Firefox-Firefox Home sounds like a useful tool for Firefox users who want to sync browser data with their mobile device. It will allow you to view websites within the app, but Firefox Home will not be a full-fledged mobile browser such as opera mini for iPhone. Apple prohibits third-party apps from turning on their own rendering engines and JavaScript interpreters, according to Mozilla. Instead, apps must use iPhone technology for these processes, which basically means firefox's core technology can't be used on iPhone. Opera has bypassed this issue by rendering websites on its servers and then sending the finished page to the iPhone. Firefox Home will also be a one-month channel, which means you can send desktop browsing data to your iPhone, but you won't be able to send data from your iPhone to desktop versions of Firefox.One solution to the one-way data problem would be to build a JavaScript bookmark for Safari for iPhone that would allow you to sync iPhone browsing data with Firefox; however, Mozilla says she has no plans to do so at the moment. No password management appMozilla will also have password management features, although all data sent from the desktop to your iPhone will be encrypted. So while your data will be secure, you won't be able to export saved passwords to your iPhone to access things like email, Facebook, or financial services. Mozilla's iPhone app is part of a broader plan to bring sync capabilities across multiple platforms to Firefox users through Firefox Sync - formerly known as Weaving . Currently, Sync is available as a Firefox plugin, but Mozilla says the feature has graduated from Mozilla Labs' status and will be included in the big upcoming release of Firefox . Firefox Home for iPhone Demo.Connect with Ian on Twitter (@ianpau). Keep in touch: When you buy something after clicking links in our articles, we can earn a small commission. Developers who may be curious about building mobile apps but aren't sure how to get started could get a hand from Mozilla, which is testing a new code editor, called WebIDE, to be built into the Firefox browser. Developers tell us they're not sure how to start developing apps on the web, with so many different tools and templates to download from different sources. We are solving this problem with WebIDE. dave camp, Mozilla's director of development tools, wrote in a blog post announcing the new IDE (integrated development environment). The webide version is now included in the nightly constructions of future versions of Firefox that are currently being developed. Night versions are only published for testing purposes, allowing external parties to look at new what is the browser's browser team On. With WebIDE, developers can start with a functional draft web application that can run on the desktop or in the mobile phone browser. They can then fill javascript, CSS (Cascading Style Sheets) and HTML5 code using editors within the browser window. They will see their changes immediately in another window that runs the app into simulation mode. Although the tool can be used to develop desktop web applications, it is intended primarily for mobile devices. Mozilla has also set up a repository where developers can contribute to additional templates. Developers can also test the app on the device itself, by running it on firefox mobile browser and correcting correct correction of documents via USB via the Document Remote Correction API (application programming interface). Eventually, the software will be able to communicate with other browsers, such as Chrome for Android and Safari on iOS. Over time, the browser will also offer a method of testing applications via Wi-Fi.WebIDE, which is based on the editor of CodeMirror open source and uses the .js code tern framework. It also uses a fairly large set of document correction and inspection tools already built into Firefox, called Firefox Developer Tools. Mozilla did not offer an estimate of when WebIDE will be included in the full firefox release. The next version of the browser, Firefox 31, is scheduled to be released in the week of October 22nd.
